

# Infrastructure As a Service (IAAS) - Managed Service

A service whereby Connectus provides a managed secure and **resilient virtual infrastructure (servers, storage, computing power and virtualisation) behind a robust firewall to host and deliver the Customer's specific environment, which offers essential compute, storage and networking resources on demand, on a pay-as-you-go basis.**

Connectus will support the operating system and perform infrastructure platform updates.

## This service includes the following:

- Virtual Infrastructure and resources
- Storage
- Computing Power
- Server Patching
- Pro-active maintenance
- Firewall security
- Operating system support

## Features and Benefits

- Sited in multiple geographic locations within the UK
- Near instantaneous recovery in the event of system, equipment, or site failure
- Provision of an additional testing server cloned from the production server to test either significant operating system or platform updates or to test further code updates. This server will have reduced processing capabilities compared to the production server.

- Provision of a development server initially sourced from a clone of the production server. This server will have reduced processing capabilities compared to the production server.
- Provision of a clean development environment to support the development of the replacement application. This server will have reduced processing capabilities compared to the production server.
- Automated backups and retention processes using offsite storage providing a further level of protection
- Fixed monthly costs
- Flexibility to adjust or increase processing and storage capabilities in-line with demand
- Proactive Monitoring
- Backup
- Replications
- Disaster Recovery as a Service (Cold Storage)
- Dedicated Servers
- Colocation Services

**Our unique, tailored and scalable approach to cloud hosting delivers extensive benefits for client and is supported by our experts with decades of industry experience.**

**Our (IAAS) - Managed Service solutions not only give you full control, but ensure reliability and security, designed to meet your specific businesses need Our service is secure, robust, superfast and scalable to meet the needs of your business.**
